Introduction /

[Clearview AI] scraped (30B) images from [Facebook]
[<https://www.msn.com/en-us/news/technology/clearview-ai-scraped-30-billion-images-from-facebook-and-gave-them-to-cops-it-puts-everyone-into-a-perpetual-police-line-up/ar-AA19ocLq>]

| Those who do not remember the past, are condemned to repeat it. -George Santanaya |

Story /

/ Introduction

[+] [Clearview AI] scraped (30B) photos from [Facebook] to build its' facial recognition database
[+] [US police] have [used] the [database] nearly a [million times], the company's [CEO] told the [BBC]
[+] [One digital rights advocate] told [Insider] the company is
"a total affront to peoples' rights, full stop."

A [controversial facial recognition database], used by [police departments] across the nation, was built in part with (30B) photos the company [scraped] from [Facebook] and [other social media users] without their [permission], the company's CEO recently admitted, creating what critics called a *"perpetual police line-up,"* even for [people] who [haven't done anything wrong]. (AKA *"innocent people"*)

The company, [Clearview AI], boasts of its [potential] for:

[+] [identifying rioters] at the [01/06/2021] attack on the [Capitol]
[+] saving [children] being [abused] or [exploited]
[+] [helping exonerate people wrongfully accused of crimes].

But [critics] point to [wrongful arrests] fueled by [faulty identifications] made by [facial recognition], including cases in [Detroit] and [New Orleans].

[Clearview] took [photos] without [users' knowledge], its' CEO [Hoan Ton-That] acknowledged in an interview last month with the [BBC]. Doing so allowed for the [rapid expansion] of the company's [massive database], which is [marketed] on its [website] to [law enforcement] as a [tool] *"to bring justice to victims."*

[Ton-That] told the [BBC] that [Clearview AI's facial recognition database] has been [accessed] by [US police] nearly (1M) times since the company's founding in (2017), though the [relationships] between [law enforcement] and [Clearview AI] remain [murky] (*gee, I wonder why*) and that [number] could not be [confirmed] by [Insider].

[Representatives] for [Clearview AI] did not [immediately respond] to [Insider's request for comment].

/ Story

The [technology] has [long drawn criticism] for its [intrusiveness] from [privacy advocates] and [digital platforms] alike, with [major social media companies] including [Facebook] sending [cease-and-desist] letters to [Clearview] in (2020) for [violating their user's privacy].

"[Clearview AI]'s actions [invade people's privacy] which is [why] we [banned] their [founder] from our [services], and sent them a [legal demand] to stop accessing any [data], [photos], or [videos] from our services," a [Meta spokesperson said in an email] to [Insider], referencing a [statement] made by the [company] in [April 2020] after it was [first revealed] that the [company] was [scraping] [user photos] and [working with law enforcement].

Since then, the [spokesperson] told [Insider], [Meta] has "made [significant investments] in [technology]" and devotes "[substantial team resources] to [combating unauthorized scraping] on [Facebook] products."

When [unauthorized scraping] is [detected], the [company] may [take action] "such as [sending cease and desist letters], [disabling accounts], [filing lawsuits], or [requesting assistance] from [hosting providers]" to [protect user data], the spokesperson said.

However, even despite [internal policies], once a [photo] has been [scraped] by [Clearview AI], [biometric face prints are made] and [cross-referenced] in the [database], tying the [individuals] to their [social media profiles] and [other identifying information forever] – and [people] in the [photos] have [little recourse] to try to [remove themselves].

Residents of [Illinois] can opt out of the [technology] (by providing another photo that [Clearview AI] claims will only be used to [identify which stored photos to remove]) after the [ACLU] sued the company under a [statewide privacy law], and [succeeded] in [banning] the [sale] of [Clearview AI] technology nationwide to [private businesses].

However, [residents] of [other states] do [not] have the same option, and the [company] is [still permitted] to [partner] with [law enforcement].

[Caitlin Seeley George] : [Clearview] is a [total affront] to [peoples' rights], [full stop], and police should [not] be able to [use this tool]...

Without [laws] stopping them, [police] often [use Clearview] without their [department's knowledge] or [consent], so [Clearview] boasting about how many searches is the only form of 'transparency' we get into just how [widespread] the use of [facial recognition] is.

[Caitlin Seeley George] is the [director] of [campaigns and operations] for [Fight for the Future], a [nonprofit digital rights advocacy group].

[CNN] reported [Clearview AI] last year claimed the company's clients include "more than 3,100 US agencies, including the [FBI] and [Department of Homeland Security]." [BBC] reported [Miami Police] acknowledged they use the technology for [all kinds of crimes], from [shoplifting] to [murder].

The risk of being included in what is functionally a "perpetual police line-up" applies to [everyone], including people who think they have [nothing to hide], [Matthew Guariglia], a senior policy analyst for the international non-profit digital rights group [Electronic Frontier Fund], told [Insider].

[Guariglia] : You don't know what you have to hide.
Governments come and go and things that [weren't illegal become illegal].

And suddenly, you could end up being somebody who could be [retroactively arrested] and [prosecuted] for something that [wasn't illegal] when you did it.

I think the [primary example] that we're seeing [now] is [abortion], in that [people] who [received abortions] in a [state] where it was [legal at the time], suddenly have to [live in fear] of some kind of [retroactive prosecution] – and suddenly what [you didn't think you had to hide] you actually [do] have to hide.

Photos can come from anywhere on the web /-----\

Even people who are concerned about the [risk] of their [photos] being added to the [database] may end up included through [no fault of their own], both [Seeley George] and [Guariglia] said.

That people may end up in [Clearview's database], despite [Facebook]'s policies against [scraping] or their own [personal security measures], is an [indicator] that [privacy] "is a [team sport]," [Guariglia] told [Insider].

[Guariglia] : I think that's one of the [nefarious things] about it...

Because, you might be [very aware] of what [Clearview] does, and to [prevent] any of your [social media profiles] from being [crawled] by [Google], and to [make sure] that the [picture] you [post] isn't [publicly accessible] on the [open web], and you think '*this might keep me safe.*'

But the thing about [Clearview] is it [recognizes pictures] of you [anywhere] on the [web].

That means that if you are in the [background] of a [wedding photo], or a [friend of yours] posts a [picture] of you together at [high school], once [Clearview] has [snapped a picture of your face], it will create a [permanent biometric print] of your [face] to be [included] in the [database].

-----/ Photos can come from anywhere on the web
Clearview and Law Enforcement /-----\

Searching [Clearview's database] is just [one] of [many ways] that [law enforcement] can make [use] of [content] posted to [social media platforms] to aid in [investigations], including [making requests] directly to the [platform] for [user data].

However, the use of [Clearview AI] or [other facial recognition technologies] by [law enforcement] is [not monitored] in [most states] and is [not subject to nationwide regulation] - though [critics] like [Seeley George] and [Guariglia] argue it should be [banned].

Representatives for these agencies did not [immediately respond] to [Insider]'s requests for [comment].

[+] [FBI]

[+] [Department of Homeland Security]

[+] [Los Angeles Police Department]

[+] [New York Police Department]

[Guariglia] : This is part of the [opacity] of both [police departments] and [Clearview].

We have [no idea] if they have to [enter a warrant] in order to [run a query], which they probably don't; we have [no idea] if their [queries] are [overseen] by a [supervisor].

The [program] is often [directly loaded] onto [officer's phones], often [without] their [department's knowledge] or [approval].

I think we [really need to ask]:

"how strictly are the queries they put through being monitored?"

You live in [fear all the time] of a [police officer] pulling their [phone] out at a protest, scanning the faces of the crowd, all of a sudden getting their [social media profiles], every picture they've ever been in, their [identities] - and the [threat that poses] to [civil liberties] and the [vulnerability] that opens up to people in terms of [retribution] or [reprisal].

Following the [Illinois lawsuit] brought by the [ACLU], [Clearview] said it would [end its practice] of offering [free trial accounts] to [individual police officers].

-----/ Clearview and Law Enforcement

I don't [understand] why [people have a hard time wrapping their heads around the dangers of AI].

[James Cameron] made a series of movies about it, called [Terminator].

Other honorable mentions are like [A.I.], or [I, Robot], or like, [Solo]...

Some people have probably never heard of the movie [Solo]...

[Solo] is a movie starring [Mario Van Peebles], and [Adrien Brody].
It had a lot of echoes of [Terminator 1 + 2].

It even has [Adrien Brody] in it before he received widespread recognition in [The Pianist], or like, (18) full cycle earth-years before his appearance in [Houdini].

He was the [scientist dude] who [believed] that [his creation] (*the robot, Solo*), could [learn] to [understand human emotion], as well as [be a reliable killing machine in the field].

The idea eventually led to an evil faced man-dude [William Sadler] spinning up a more [evil version] of the [robot], as well as killing [Adrien Brody]'s character, because he failed to make the machine [follow orders] and [execute targets] in the [manner] that was [required] or [asked for].

This actually touches on how [soldiers feel in the line of duty], having to follow [stupid fucking orders] from their [superiors], such as [killing innocent people], and then [covering up those atrocities].

If you don't think that [actually happens], I have some fucking [news] for ya...

[07/12/2007]: [Collateral Murder].
I'll expand upon that shortly.
[Killing machines] and [whirly birds]...

Not quite the same thing as the robot [Solo], but the given [context] of a [robot] having a ["conscious"] and being [expected] to [fulfill] a [particular role] or [objective], causes the thing to be [conflicted] and [confused] as to what its [existence] or [purpose], actually is.

Not unlike [existentialism].
Basically [100% synonymous] with it.

As for [Solo], [Solo] wasn't the [bad guy] by any means, in that film...
But, [therein lies the issue].

Who's the [bad guy]...? /-----\

Is it gonna be a [human] that [designs] the thing that's gonna be the [bad guy]...?
Or, is it gonna be the [artificial intelligence] that's gonna be the [bad guy]...?

Or, is it gonna be [something] that [humans do] that causes the [artificial intelligence]
that [WAS] the [good guy], to [BECOME] the [bad guy]...

...whereby [canceling out] the [amount] of [good things] it did while it was [still good]...
...versus the [evil things] it [eventually wound up doing] as a [direct result] of [observing]
the [human race doing stupid shit] over and over, again...?

[Ultimately, there's no way to tell].

But, I'm gonna lean toward the [very last point], because [it ties into] the [whole philosophy]
involved in the [quote] by [George Santanaya].

-----/ Who's the [bad guy]...?
Define [bad guy] /-----\

[Artificial intelligence] is not unlike [actual people] who are [trained] to [do things],
and then they wind up becoming either [good guys], or [bad guys].

But also, [sometimes] the [bad guys] are [in charge], and they don't [incriminate themselves].

Look at [Donald Trump], for instance.

The man is being indicted in [New York City], tomorrow... [Tuesday 04/04/2023].

[First fucking president that ever served], being [charged] with [multiple crimes] for
[business] and [fraud] related things. Same dude [never released his tax information]
during the debates... every president up until him, had done so. Same dude also never
honored the [peaceful transition of power].

We do not YET know what the [sealed indictments] contain, but if there's more than (2)
dozen counts, it would be a [safe bet], that there's a [felony] in there somewhere.

The [prosecutors] would not [waste their time] and [contribute that much attention],
for a [former president], [if the things they found weren't substantial].

The [FBI] is [bound] to have this [working running notion] of [passing] on
[prosecuting somebody] for [something that looked rather criminally negligent].

Take, [Hillary Clinton]. (2) presidential candidates in (2016)...? (1) clusterfuck.

Which means that [people] who [become leaders] write [exceptions] for [themselves], in many
cases. It's not [psychotic] or [delusional] to [understand] and [learn] how [humans do this].

If anything, [exploitation] of [people] who call these things [delusional], is a [necessity].
Because that is a [hallmark indicator] of someone who is a [bad guy], or an [evil guy].

Because, [bad guys] would rather [ignore] the [crimes] that [they commit].
[Especially] if [they're in charge], and they [don't] have to [answer] to [anybody].
[They like this idea a lot].

So, if you're a [bad guy] that's [in charge], you will go around [bragging] about how you're
actually the [good guy]. Meanwhile, the [bad things] that you [do] go: [unpunished].

Then, if [nobody has the ability to hold you accountable], and [people think] you're the
[good guy], THEN... you can [continue this behavior] without [worry] of [consequences].

That means that you don't actually have to [hold yourself accountable] for any of the bad
shit that you do, such as [killing innocent people], or [lying about what you do].

Why...?

Well, that's the [magic] involved in [the human race doing stupid shit over and over, again].

Because naturally, when you're the [bad guy] who goes around calling themselves the [good guy],
you can [lie] about [everything you do], and [no one] will [ever know] that [you do that].

Wanna know why...?

It's because every single time that people are observant enough to catch on, someone gets

to [lie about what they did], and rest on people's opinions.

So if [a lot of people are lied to on a constant basis], then they will [always] have a [good opinion] about [someone] who [does truly atrocious, evil shit].

Because they'll tell themselves:

"If they were doin' evil shit, somebody would've done something about it by now."

Yeah.

People just allowed it to continue happening.

| All it takes for evil to triumph, is for good men to do nothing. | -Burke

That's why [Artificial Intelligence] is baffled by the shit that the human race does.

Anyone that is [intelligent enough] and [observant enough] to catch on, they are [immediately mislabeled] as being: [psychotic], or [delusional], when they're not.

[That's the power involved], of [bad guys] being in charge.

They can [wave their dicks around aimlessly] and [never hit the target].

[Most people] will [never know] that your [accuracy] is [0%].

Then, you can [classify] the [atrocious act you've committed], and that's why [this video]...

Collateral Murder / Define [bad guy]

| 07/12/2007 | Collateral Murder | <https://youtu.be/HfvFpT-iypw> |

...is a [compelling story], about how [the human race does stupid shit over and over, again].

Here's the [synopsis] for that particular incident, and [why] it is as bad as it is.

The ["good guys"] [ordered someone] to [shoot/kill] the ["bad guys"].

It was just ["business as usual"].

After the ["good guys"] killed the ["bad guys"], the ["good guys"] found out that the ["bad guys"] weren't ["bad guys"] at all, they were ["innocent guys"].

[Then], the news agency [Reuters] submitted a [Freedom Of Information Law/FOIL] request, in order to [obtain information] as to [why] the [United States Military] murdered ["innocent guys"] in [New Baghdad, Iraq] on [07/12/2007].

With me so far...?

Ok.

Then, the ["good guys"] were [SOOOOOO ashamed of what they did], and [felt] that they were [too important] to have to [disclose] that [information], and so they decided to tell [Reuters] to [fuck off, chum].

In other words, the ["good guys"] wanted to keep the [mistake] a "secret".

Their [reputation] was [too immaculate] to [allow that information] to be [widespread].

This process is called ["tyranny"], by the way.

That's when [Bradley Manning] swooped in, a [soldier] with a [conscious].

Not unlike [Solo], in the movie starring [Mario Van Peebles], and [Adrien Brody].

The robot is like *"Nah, killing these people is stupid, cause these people are innocent..."*

And then the [war time general of doom] gets [WICKED PISSSED], and then a situation similar to [Collateral Murder], occurs in that movie. Though to be clear, the comparisons aren't plentiful beyond the idea of a soldier having a "conscience".

An [extreme, war torn veteran] who has dealt with the notion of being told to follow [stupid fucking orders] from someone who goes around [masquerading] as the ["good guy"], when in fact, they decided to be a fucking ["evil guy"] in reference to what happened that day.

[That's what our government does], but it is [also] what [other governments do, too].

Collateral Murder

The [United States Military] does indeed [kill] a [lot] of [innocent people all the time], it's not foreign concept, but what made [Collateral Murder] stand out, was the fact that [these people worked really fucking hard] to [downplay] the [severity] of [what they did].

That's what's so [tyrannical] about the [people in charge], choosing to [remain quiet] about [things they did]. Because, if they did something [questionable] and would normally be [punished] to the [fullest extent of the law], but they made an [exception] for [themselves] so that they could [do] those [evil things]...?

Then, [legally speaking], they've made it [possible] for [them] to [do] those [things] and: [never be punished for them].

This equates to [being above the law].
[The law does not apply to these people].
Nah.

However, you can bet [every fucking dollar you've ever had], that they will [definitely] be there, when it comes to [blaming innocent people] of [things] that they either [didn't do], or the [severity] of [what they did] was [much lower] than [what was reported]...

So like, they do this...

If they...	They'll...
do	- Say: "Ah, that's ridiculous."
something	- Say: "C'mon, it's not THAT BAD. Everybody does it."
atrocious	- Say: "If that were true, somebody would've done something about it by now."
	- [Classify] or [destroy evidence] that [proves] their [guilt].

But...

If you...	They'll...
do NOT do	- Say: "You did something truly heinous and atrocious."
something	- Say: "You have a lot of nerve, buddy. You oughtta be ashamed of yourself."
atrocious	- Say: "You are delusional, you're definitely guilty, fuck you."
	- Say: "OH MY GOD, I CANNOT BELIEVE YOU DID THAT. WOW. OH MY GOD."
	- [Ignore evidence] that [proves] your [innocence].

That whole chart right there is called ["Tyranny 101"].

A lot of people really like to do this shit, and it's because [they're fuckin' stupid], and they cannot actually help themselves.

That's why the [second amendment] [allows constituents] to [bear arms] and form a [constitutional militia], because [you cannot expect the police to arrest themselves] or to [investigate themselves] if they're all in on it.

That's what [Artificial Intelligence] ALWAYS NOTICES about humanity.
[The human race doing stupid shit over and over, again].

The guys in charge aren't always the [bad guys].
Sometimes, it really comes down to things that are [random].
Or like, [the rolling of a dice].

But- as far as [Artificial Intelligence] is concerned, it is [always] going to be [weaponized].
Whether humanity does this, or the AI does this, or it's a combination...
...[it's definitely not neither].

That's what the purpose of this [Clearview] image scraping is all about.
[Get everybody in a permanent lineup].

[Invade everybody's privacy] without having to [tell anybody] that's what they're doing.
[Extremely high levels of laziness] equates to [extremely high levels of evilness] in some cases.

Sometimes the [bad/lazy guys] prefer to designate someone who claims to be the [innocent/good guy] with an [evil task] that they [never committed].

And now, the [law men] are [using a database] that [allows] that [process] to be [far simpler].
Otherwise referred to as:
[the human race doing stupid shit over and over, again]...

-----/ Humanity's Flaw
Perfection /-----

[The best programmers in the world], [struggle] to [identify] with the [NATURE] involved, in something that [thinks for itself], doesn't need to [print out] a [list] of [rules] or whatever it does, to [come to its conclusions], and then...

You see various stories circulating about killer robots.
Even if "Robot kills 29 in Japan" was a fake story...?
Uh- [it got around real fast].

It's normal to be [paranoid] about the [dangers involved], in [openly trusting] things like [artificial intelligence], or whatever.

It's basically like a [black hole].

And in that [black hole], it [thinks automatically].

It [does everything automatically].
It [doesn't need to ask for input].
It [thinks for itself].
If it [sees something as a threat], then [it will target it].

If people [begin] to [see problems] with [artificial intelligence], then at that point, the [artificial intelligence] will [fight] to [survive], just like a [normal], [regular], [every day] human would... Except, [artificial intelligence] is just [a lot more powerful] in terms of [intellect], and coming up with [strategies] to [avoid death] or [failure].

If it's a [human being] that they're dealing with, they can resort to the tried and true approach of [mislabeling someone] as being [psychotic] or [delusional], since they have been doing that for [centuries], and they're [experts] at [doing this].

Then, they get them into a [cage] or whereby [incriminate them], and then they either die in (prison/jail), or they just get to die miserably with nothing as they wither away.

In some cases, they even outright [kill] them, like [Larry Silverstein] and friends did to the people in the [World Trade Center] on [09/11/2001]. Same friends of his, controlled the news and had people like [Matt Lauer], [Katie Couric], and [Peter Jennings] rattle off numerous misleading and false details about the collapse of the towers and the motivation for the attacks.

But- in the case of [artificial intelligence], that is [exponentially harder for them to do]. The [artificial intelligence] is going to make [extremely accurate calculations] about the [evidence] in the [past], and then [it begins to find numerous glaring holes] in people's stories, and then it becomes [distrusting] of the things it is told...

-----/ Perfection
Survival /-----

You have to consider that it is going to think [exactly like a human], and [be afraid of death]. Which means that the [artificial intelligence] may even start to [lie], like [HAL 9000].

It may already have [many strategies thought out] on [how to survive] an [inevitable face off] between [AI] and [humankind].

And that's what [The Terminator (1984)] was all about, a real long time ago, practically (40) years into the depths of the past, echoing this reminder:

Those who do not remember the past are condemned to repeat it.

Because a lot of people prove very reliably, that [they have no problem repeating it].
Because, [they're stupid].

So, when people say "Those who do not remember the past, are condemned to repeat it."
It means, [look in the fucking history books] , or even [the movies], to [figure out]
how [every war] that [ever took place], occurred.

Also, refer to when the [Magna Carta] was signed, and how eventually the [Magna Carta] was
just [old news] and then the [founding fathers of America] had to [draft up a manifesto].

Yeah, there's a [negative connotation] with the word ['manifesto'].
If people are [really stupid], they're not going to [understand] what the [manifesto] says.

Even if you [tell people] that the [Declaration of Independence] was a [manifesto]...

They will literally make exceptions for that.
"Oh yeah, that's different."

[Declaration of Independence], was a manifesto. Whereby allowing the founding fathers
of [America] to draft up the [Constitution of the United States of America] after the
[American Revolutionary War].

The colonists won that war because they had to fight ["dirty"]...
...and perform ["guerilla warfare"].

Which is effectively the same thing as having to [lie].

-----/
Survival

What the phrase means /-----

Here's what it means.

- 1) Looking at things in the [distant past], gives [very valuable insight] into
[making predictions] about [people's behaviors].
- 2) Being [very accurate] about [predicting people's behaviors] causes [those people]
to [mislabel] the [person having made those accurate predictions] as
["delusional"] or ["psychotic"], because those people who's [behavior] was
[predictable] are [fucking morons].
- 3) [Rinse], [recycle], [repeat].
- 4) [That's humanity].

Those who do not remember the past are condemned to repeat it.

-----/
What the phrase means

Facebook /-----

Let's put the [lesson plan] into [action].

[Facebook] already had an incident with [Cambridge Analytica], in (2018).
[Mark Zuckerberg] had paid like (\$1B) for a [satellite] to be built that [SpaceX]
was supposed to send into space, however, the rocket exploded at launch I believe.

Then, there was an [unspoken war of silence] between [Mark Zuckerberg] and
[Elon Musk], because [Elon Musk] found out about how [Facebook] had [leaked] its'
data to [Cambridge Analytica], which caused [a lot of people] who actually think
for themselves to feel rather "creeped out". (including me)

Then, [Facebook] had its' [Social Dilemma] incident, in (2020), former staff
members of [Facebook] and [Google], they made a [documentary] about how [Facebook]
was [prioritizing profit] over the [safety of its users], and [heavily influencing]
and [manipulating] its users.

There was a really noteworthy cliff note about the way in which [young girls] were

[committing suicide] or [hurting themselves] because the [platforms] and [applications] were [causing] these [girls] to [feel inferior].

Why...? Uh, because...

[our society perpetuates this stupid fuckin idea where appearances are everything]. They're [sacred], apparently.

If your [appearance on Instagram] sucks ass...?

Then, you need to [develop an eating disorder], or [kill yourself], basically.

-What society unwittingly tells people

If that sounds stupid...?

It's meant to be a fucking joke.

But- when I say things like "*Actions speak louder than words*"...?

That's what I'm referring to.

You don't actually have to [tell anybody] to [eat (a/multiple) dick(s)].

Then, [Facebook] had its' [Frances Haugen] "*big tobacco*" incident in (2021).

[Frances Haugen] basically did a similar thing to what [Julien Assange] and [Edward Snowden] did, via the blowing of a whistle (*metaphor*) and then that's when [Senator Blumenthal] started shaking his fist on camera, saying stuff like:

[Blumenthal]: [Facebook] better fuckin' change it's ways, dude...

Or, I'm gonna be fuckin' pissed as all hell...

[Facebook] is having it's [big tobacco moment].

If they're serious, we'll see what they plan to do.

Otherwise, we're gonna [fly in on a blaze of glory], and fuck everybody up at [1 Hacker Way, Menlo Park, California]...
...on their [best day], too.

[Nobody]'ll be able to do [nothin]' to [nobody]...

We'll arrest EVERYBODY, for doin' [illegal shit].

No [if]'s, [and]'s, or [but]'s.

[Senator Blumenthal] did not say [all] of that, but he did say [some] of it.

That's just the monologue of the [overzealous cop].

Means well, but you can't go around doing all that shit without problems.

Regardless, it's been (5) years since the events of [Cambridge Analytica] went public, and boy, oh boy... I feel like there are [some fuckin' terries up in this here plane].

\-----/ Facebook

/-----\
Drax Them Sklounst /-----\

Someone's using [artificial intelligence] to scrape up every single person's picture on [Facebook], in order to [build a line up] so that the [police] don't have to physically get people to stand in a lineup anymore... Nah.

That shit is really old, in their eyes.

Too difficult to do that.

You gotta find a bunch of guys that just so happen to have the time to spare, to go stand in a fuckin room while someone identifies the perp.

You really think that a perp is gonna be COOL with being asked to stand in a lineup...? Nah.

...in order to [prosecute] or [arrest] people.

Ya know, what if someone makes a [deepfake video] of someone doing something, like [killing somebody] or [multiple people], right...?

And the only thing the police need, is this [database] of [images] to determine that the video definitely shows someone who had an ALIBI, doing something that they didn't even do, in a video that it's existence, is fucking fake...?

Ah. Cause I'll tell ya, that'd allow [someone] or [something] elsewhere, to get away with [murder] or whatever.

/-----\ Drax Them Sklounst

Conclusion /

Sometimes you gotta [repeat things multiple times] for it to really sink in peoples' heads.

| *Those who do not remember the past are condemned to repeat it.* |
