

# Introduction to Salt Stack

We're not just talking about NaCL. Nope. (That's the chemistry term for Sodium Chloride/salt, by the way...)

This happens to be, among the very short list of the finest quality salts on the fuckin' planet...  
Just so happens to ALSO be shaped into a stack.  
Which is why we went with the name 'SaltStack'.

It's a no brainer, isn't it...?  
Don't just take OUR word for it, though...

\*points at the salt\* This salt right here...?  
Well... you could order some of it online, from Amazon.com

/--\\

You : ...you can...?

Me : Yep.

Go to Amazon.com and submit an order for it, and...  
...might not be \*points\* THAT particular stack of salt right there...?  
But, ANOTHER stack of salt of the same build quality...  
...will show up at YOUR doorstep...  
...within the next... (estimated-salt-range-delivery-zone) day(s)...

You : Wow, I'm impressed already.

Me : Yeah, well, wait till you try it for yourself.

This shit is NO JOKE...

You : I believe ya...~!

\\/--\\

Look.

This salt stack, the one you would get if you placed an order...?

Well, it may not be from the saltiest of all lakes in the world...

But it's fuckin' plenty salty enough, dude.

I suppose some people might be thinkin' "Yeah right, dude. There's NO WAY this salt is THAT GOOD."

Well, I'm tellin' ya right now, straight from the horses mouth...

This (shit/salt) IS that good.

But- sometimes you need to get some fact checks to make certain that there is NO CHANCE...

...that anyone could successfully make the argument...

...that this salt stack might not even be THAT salty...

...since it came from a lake with only a MODERATE amount of salt in it...

However, let's pretend that its' saltiness rating had its' true value stored in a BIG classified file...

...and that the salt level of the LAKE that it CAME FROM, was CLASSIFIED INFORMATION...

Perhaps it's a LARGE COMMUNITY OF PEOPLE who nicknamed it this salty lake...

...so that it could keep some Native Americans away from their colony during manifest destiny...

Or, maybe it just happens to have a saltiness factor that is slightly above average for a lake...

Maybe, they can barely tell that the water is THAT salty...

Maybe, they ALL think that its a normal water lake, and that when they go to taste normal water...?

...maybe they get grossed out when they taste it, and that it's pretty nasty or WAY too sweet...

...THEN AGAIN, MAYBE THEY THINK THE WATER IS WAY TOO SALTY TO DRINK...

Then again, maybe SOME people seem to have an endless supply of cans of lead based paint, going back at least a couple decades if not more... Since they have so much lead based paint, their FAVORITE activity among ALL others, when in close proximity to these cans...?

Well, breaking off pieces of this lead based paint that is there, and then snacking on as many of those as they like, as if they're all potato chips. And, instead of ever really coming to terms with how dumb that is, to do...?

Well, they may tell you "That's just your opinion...~!"

Perhaps they may even say that it's not up to you to tell them whether the lake is SALTY, or NOT...

So, you have to let these people make their own choices, to drink the water for themselves.

THEN, just like 100% of the OTHER people that had an opinion of the water tasting way too salty...?

...this person who said:

/--\\

Person : HEY~!

It's not up to YOU, to decide whether or not the water is salty, to me.

But THAT'S the type of NaCl we're talkin'.
